

IMPERIAL SOLUTION COMPANY

Dammam | Kingdom of Saudi Arabia

WEBSITE DESIGN BRIEF

Positioning, Sitemap and Layout Requirements

Issued to: Website Design Team

Version 1.0 | Initial Brief

1. Purpose of this Brief

This brief sets out the positioning, structure and content logic for the Imperial Solution Company (ISC) website. It is issued at the planning stage so that the sitemap, wireframes and overall layout can be developed on an agreed foundation before design work begins.

The designer is asked to review Sections 2 to 5 carefully. The commercial positioning described there determines the structure of the site, and a conventional contractor or supplier website layout will not carry it correctly.

2. Company Snapshot

Imperial Solution Company is a MISA-licensed limited liability company based in Dammam, Kingdom of Saudi Arabia. The company operates across manufacturing, specialist construction solutions and industrial supply, and is in the process of establishing local manufacturing capability in the Eastern Province.

ISC is a newly established entity. It does not yet hold a portfolio of completed projects under its own name. The website must therefore build credibility through its model, its partnerships and its capability rather than through a project gallery. This is central to everything that follows.

3. Positioning and Core Narrative

The single sentence the website must communicate:

ISC brings proven international manufacturing technologies into the Kingdom through partnership, and localises production — so that the Kingdom is supplied with Saudi-made products rather than imports.

Every page should reinforce this. ISC is not positioned as a trading intermediary, and not as a general contractor. It is positioned as a localisation platform: a Saudi company that identifies established manufacturers abroad, partners with them, and transfers their technology into local production within the Kingdom.

This narrative achieves three things. It explains why a new company deserves attention. It aligns ISC with national industrial localisation priorities. And it turns the absence of a project history into a forward-looking proposition rather than a gap.

Tone

- Confident and institutional, not promotional. No superlatives, no exclamation marks.
- Written for engineers, consultants and procurement managers — precise and specification-led.
- Forward-looking in ambition, but factually exact about current stage. See Section 10.

4. Target Audiences

The site serves three distinct visitors. The layout must give each of them a clear route from the homepage.

Audience	What they need	Primary destination
Contractors, consultants and developers	Product specifications, capability, compliance, ability to quote	Division pages, Industrial Supplies, RFQ form
Industrial and energy sector buyers	Product ranges, safety certification, sourcing reliability, lead times	Industrial Supplies, FRC and Safety
International manufacturers seeking	Evidence that ISC is a credible localisation vehicle	Our Model, Partners

a Saudi partner		
------------------------	--	--

The third audience is often overlooked and is commercially significant. The site should actively invite inbound partnership enquiries from manufacturers abroad.

5. Business Pillars

ISC's activities group into three pillars. The homepage and main navigation should reflect this grouping rather than listing activities flat.

Pillar 1 — Localised Manufacturing

Technologies brought into the Kingdom through partnership with established international producers, for production on Saudi soil.

- **GRC / GRP / GRG.** Glassfibre reinforced concrete, plastic and gypsum. A production facility is being established in Dammam in partnership with an established regional manufacturer.
- **Construction Chemicals.** Partnership covering a full construction chemicals range. Product is currently imported from the partner's existing production facility; local manufacture in the Kingdom is the planned next phase.

Pillar 2 — Façade and Cladding Solutions

Design, engineering and delivery of façade and cladding systems, provided in association with specialist partners. Presented as a capability of the ISC group offering.

Pillar 3 — Industrial Supplies, FRC and Safety

ISC's own core strength and its most immediately active line: global sourcing of industrial materials, fire resistant clothing and safety products, supplied into the Kingdom. This pillar requires the deepest treatment on the site — it is the area where ISC can transact today, and it should not be given equal visual weight to lines that are still being established.

Note for the designer: FRC means fire resistant clothing throughout this brief and throughout the site. It must never be rendered as fibre reinforced concrete, which is a different product category entirely.

6. Proposed Sitemap

Page	Purpose and key content
Home	Hero statement; the three pillars as entry tiles; a graphic explaining the localisation model; partner brand strip; enquiry call to action.
About ISC	Company background, vision and mission, leadership, licences and registrations (MISA, CR, VAT).
Our Model	The differentiator page. The localisation process shown as four steps: identify proven technology, partner, transfer, manufacture in the Kingdom. Closes with an invitation to international manufacturers.
Manufacturing	Landing page introducing the localisation pipeline, with two sub-pages below.
› GRC / GRP / GRG	Technology brief, applications, product types, facility status, partner profile with attributed reference projects.
› Construction Chemicals	Product categories, technical data sheets, current supply route, localisation roadmap, partner profile.
Façade and Cladding	Systems offered, engineering capability, delivery approach, associate partners.
Industrial Supplies, FRC and Safety	Category landing page with sub-pages — see Section 7. Deepest section of the site. Includes sourcing and quality assurance narrative and a dedicated RFQ route.
Partners	Profile cards for each technology partner, with clearly attributed reference work. Includes the partnership invitation to manufacturers.
References	Partner reference projects, explicitly labelled as partner work. Becomes ISC's own project portfolio over time.

Careers	Openings listing and application form with CV upload.
Contact	Head office and facility addresses, map, general enquiry form, separate RFQ form, telephone, email, WhatsApp.

7. Industrial Supplies — Section Detail

This section carries the most commercial weight and needs a proper category architecture, not a single page. Proposed sub-pages:

- Fire Resistant Clothing (FRC) — coveralls, jackets, trousers, standards and certification, sizing and fit
- Personal Protective Equipment — head, eye, hearing, hand, foot and fall protection
- Industrial Consumables and MRO supplies
- Sector Solutions — oil and gas, petrochemical, marine, construction

Supporting elements within the section:

- A sourcing and quality assurance narrative explaining how ISC selects and verifies international suppliers
- Certification and standards references displayed prominently, as buyers in this category filter on compliance first
- Downloadable product data sheets
- An RFQ form reachable from every product page, not only from Contact

8. Design Direction

Brand colours

Colour	Hex	Use
Navy	#1F3864	Primary. Headers, navigation, footer, headings.
Gold	#BF9000	Accent only. Rules, calls to action, highlights. Use sparingly.
Mid Blue	#2F5496	Secondary. Sub-headings, links, supporting panels.
Neutrals	White / light grey	Backgrounds and body text areas. Keep the site light and open.

Typography and imagery

- Clean sans-serif typeface, generous line spacing, strong hierarchy. Print material uses Arial; the web typeface should be compatible in feel.
- Arabic typeface must be selected deliberately, not left to a browser fallback.
- Imagery: industrial and architectural photography — production, façades, site work, safety equipment in use. Avoid generic stock business imagery.
- No image may imply that partner work was executed by ISC. Attribution must be visible wherever partner imagery is used.

9. Technical Requirements

- **Bilingual.** English and Arabic. Arabic requires full right-to-left mirroring of layout, navigation and forms — not translated text inside a left-to-right layout. English is the primary language.
- **Mobile first.** A large share of traffic in the Kingdom will arrive on mobile.
- **Content management.** ISC staff must be able to add products, references and news without returning to the designer.
- **Forms.** General enquiry, RFQ with multi-line item entry and file attachment, and careers application with CV upload. All submissions routed to a nominated ISC address.
- **Documents.** Downloadable company profile and product data sheets.

- **Performance and SEO.** Fast load on mobile networks; correct metadata and hreflang for both languages; indexable product pages.
- **Compliance pages.** Privacy policy and terms of use. Company licence numbers displayed in the footer.

10. Content Rules and Constraints

These are firm requirements. They protect ISC in prequalification and due diligence, where overstated claims are routinely checked.

Accuracy of tense

Facilities and capabilities under development must be described as such. Use "establishing", "planned" and "in development". Do not write "we manufacture" until production has commenced. Wording will be updated as each line becomes operational.

Partner attribution

All reference projects belonging to partners must be labelled with the partner's name and, where linked, directed to the partner's own website. Partner work must never be presented in a way that could read as ISC's own delivery record.

Partner names and logos

No partner name, logo or project image is to be published until ISC has confirmed written consent from that partner. The designer should build these areas as placeholders pending confirmation.

Unsigned arrangements

Capabilities arising from arrangements that are not yet formally documented are to be described as capability delivered "in association with specialist partners". No party is to be named as a joint venture partner on the public site until the underlying agreement is executed.

Official programmes and marks

The Saudi Made mark, Vision 2030 branding and any similar official emblem must not appear on the site unless and until ISC is formally enrolled and certified under the relevant programme. The ambition of local manufacture may be expressed in words; the marks may not be used.

11. Phasing

Phase	Scope
Phase 1	Home, About, Our Model, three pillar sections, Partners, Contact. English complete, Arabic complete. This is the launch scope.
Phase 2	Full Industrial Supplies product catalogue, data sheet library, Careers.
Phase 3	ISC project portfolio as manufacturing and delivery commence; news and media section.

12. Next Steps

The designer is asked to revert with the following:

- Confirmed sitemap based on Section 6, with any recommended amendments
- Wireframes for the homepage, a pillar landing page, and a product detail page
- Two homepage design directions for selection
- A written list of all content, photography, logos and documents required from ISC, so that collection can begin in parallel
- Indicative timeline and phase-wise cost
